Conclusion

Well known models for generating images:

- GANs
- VAEs
- Normalizing Flows
- Diffusion models

→ Explicit **Optimal Transport** (OT) is a recent approach to generative models.

Weak dual OT
reformulation

SGAD

Experiments
Synthetic data
Large-scale dataset

Conclusion

- μ, ν probability distributions on \mathcal{X}, \mathcal{Y} .
- Cost function: $c : \mathcal{X} \times \mathcal{Y} \rightarrow \mathbb{R}$.
- Problem: finding a **transport map** $T^* : \mathcal{X} \rightarrow \mathcal{Y}$ such that:

$$T^* \in \operatorname{Argmin}_{T\#\mu=\nu} \int_{\mathcal{X}} c(x, T(x)) d\mu(x) \quad (1)$$

- Optimal transport cost:

$$\text{Cost}(\mu, \nu) = \int_{\mathcal{X}} c(x, T^*(x)) d\mu(x) \quad (2)$$

→ **Deterministic mapping** T^* .

Weak dual OT
reformulation

SGAD

Experiments

Synthetic data

Large-scale dataset

Conclusion

- Let $\Pi(\mu, \nu)$ the set of distributions on $\mathcal{X} \times \mathcal{Y}$ with marginals μ and ν .
- Problem: find a **transport plan** $\pi^* \in \Pi(\mu, \nu)$ such that:

$$\pi^* \in \operatorname{Argmin}_{\pi \in \Pi(\mu, \nu)} \int_{\mathcal{X} \times \mathcal{Y}} c(x, y) d\pi(x, y) \quad (3)$$

- Optimal transport cost:

$$\text{Cost}(\mu, \nu) = \int_{\mathcal{X} \times \mathcal{Y}} c(x, y) d\pi^*(x, y) \quad (4)$$

→ **Stochastic** mapping π^* .

Introduction

Optimal
Transport

The Problem

Weak OT Duality

NOT

Weak dual OT
reformulation

SGAD

Experiments

Synthetic data

Large-scale dataset

Conclusion

- Generalization to **weak** costs :

$$C : \mathcal{X} \times \mathcal{P}(\mathcal{Y}) \rightarrow \mathbb{R}$$

- Problem: find a **transport plan** $\pi^* \in \Pi(\mu, \nu)$ such that:

$$\pi^* \in \operatorname{Argmin}_{\pi \in \Pi(\mu, \nu)} \int_{\mathcal{X}} C(x, \pi(\cdot|x)) d\pi(x) \quad (5)$$

- Optimal transport cost:

$$\text{Cost}(\mu, \nu) = \int_{\mathcal{X}} C(x, \pi^*(\cdot|x)) d\pi^*(x) \quad (6)$$

→ **Stochastic** mapping π^* .

Introduction

Optimal
Transport

The Problem

Weak OT Duality

NOT

Weak dual OT
reformulation

SGAD

Experiments

Synthetic data

Large-scale dataset

Conclusion

For weak OT cost C and a sufficiently regular function f ,

$$f^C(x) = \inf_{\rho \in \mathcal{P}(\mathcal{Y})} \left\{ C(x, \rho) - \int_{\mathcal{Y}} f(y) d\rho(y) \right\} \quad (7)$$

Then, the dual form of the weak OT problem writes:

$$f^* \in \operatorname{Argmax}_f \int_{\mathcal{X}} f^C(x) d\mu(x) + \int_{\mathcal{Y}} f(y) d\nu(y) \quad (8)$$

and the transport cost is equal to:

$$\text{Cost}(\mu, \nu) = \int_{\mathcal{X}} f^{*C}(x) d\mu(x) + \int_{\mathcal{Y}} f^*(y) d\nu(y) \quad (9)$$

Weak dual OT
reformulation
SGAD

Experiments
Synthetic data
Large-scale dataset

Conclusion

- New probability space \mathcal{Z} .
- Let $\rho \in \mathcal{P}(\mathcal{Z})$ with some basic assumptions.

Then, we have:

$$f^C(x) = \inf_t \left\{ C(x, T\#\rho) - \int_{\mathcal{Z}} f(t(z)) d\rho(z) \right\} \quad (10)$$

which leads to the maximin problem:

$$\text{Cost}(\mu, \nu) = \sup_f \inf_T \mathcal{L}(f, T) \quad (11)$$

$$\text{With } \mathcal{L}(f, T) = \int_{\mathcal{Y}} f d\nu + \int_{\mathcal{X}} \left(C(x, T(x, \cdot)\#\rho) - \int_{\mathcal{Z}} f(T(x, z)) d\rho(z) \right) d\mu(x)$$

The trick: noise outsourcing

Generative

The Problem
Weak OT Duality

NOT

Weak dual OT
reformulation

SGAD

Experiments

Synthetic data

Large-scale dataset

Conclusion

- Here, they introduce $T: \mathcal{X} \times \mathcal{Z} \rightarrow \mathcal{Y}$.
- Trick known as **noise outsourcing**:

Theorem

If X and Y are random variables in suitable spaces \mathcal{X} and \mathcal{Y} , then there exists $\eta \sim \mathcal{U}([0, 1])$ with $\eta \perp\!\!\!\perp X$ and a function $h [0, 1] \times \mathcal{X} \longrightarrow \mathcal{Y}$ such that $(X, Y) = (X, h(\eta, X))$ almost surely.

Conclusion

Algorithm Stochastic Gradient Ascent Descent algorithm

- 1: **Input:** distributions μ, ν, ρ accessible by samples, mapping network $T_\theta : \mathbb{R}^m \times \mathbb{R}^n \rightarrow \mathbb{R}^d$, potential network $f_\omega : \mathbb{R}^n \rightarrow \mathbb{R}$, number of inner iterations K_T , (weak) cost $C : \mathcal{X} \times \mathcal{P}(\mathcal{Y}) \rightarrow \mathbb{R}$, empirical estimator $\widehat{C}(x, T(x, Z))$ for the cost
- 2: **Output:** learned stochastic OT map T_θ representing an OT plan between distributions μ, ν
- 3: **repeat**
- 4: Sample batches $Y \sim \nu, X \sim \mu$, for each $x \in X$ sample batch $Z_x \sim \rho$
- 5: $\mathcal{L}_f \leftarrow \frac{1}{|X|} \sum_{x \in X} \frac{1}{|Z_x|} \sum_{z \in Z_x} f_\omega(T_\theta(x, z)) - \frac{1}{|Y|} \sum_{y \in Y} f_\omega(y)$
- 6: Update ω by using $\frac{\partial \mathcal{L}_f}{\partial \theta}$
- 7: **for** $k_T = 1, 2, \dots, K_T$ **do**
- 8: Sample batch $X \sim \mu$, for each $x \in X$ sample batch $Z_x \sim \rho$
- 9: $\mathcal{L}_T \leftarrow \frac{1}{|X|} \sum_{x \in X} [\widehat{C}(x, T_\theta(x, Z_x)) - \frac{1}{|Z_x|} \sum_{z \in Z_x} f_\omega(T_\theta(x, z))]$
- 10: Update θ by using $\frac{\partial \mathcal{L}_T}{\partial \theta}$
- 11: **until** converged

Large-scale dataset

Conclusion

- 2D standard normal distribution for \mathcal{X} .
- Moon distribution for \mathcal{Y} .
- Weak OT cost for $\gamma = 1$:

$$C(x, \mu) = \int_{\mathcal{Y}} \frac{1}{2} \|x - y\|^2 d\mu(y) - \frac{1}{2} \text{Var}(\mu) = \frac{1}{2} \|x - \int_{\mathcal{Y}} y d\mu(y)\|^2 \quad (12)$$

The parameters:

- simple feedforward model.
 - 2 hidden layers (100 units each).
 - ReLU activation.
- Adam optimizer.
